## **Liquid (LQ) Relief Valve Replacement Interval**

Cyrus Shank recommends the 5 year replacement interval for our Liquid Relief Valves due to the high variability in maintenance procedures. Assuming ideal maintenance and inspection intervals, the LQ valves will last well beyond the 5 year installation lifespan. Ideal maintenance and inspection means that at a bare minimum, the exterior of the valves are visually inspected every 6 months to 1 year for corrosion or rusting. If there is no rust or corrosion present, the valve is not subject to the 5 year replacement interval.
